3	Screen
4	C Key
5	Navigation Key
6	End Key and Power Key
7	Keypad
8	Microphone
9	Loudspeaker
10	Battery Cover

To insert the battery

Before starting to use your phone, you need to insert the battery.

1. Remove the battery cover.
2. Insert the battery with the label facing up.
3. Close the battery cover into place.

Charging the battery

The phone battery is partly charged when you buy it. You can use the phone while it is charging.

1. Connect the charger to the phone. It takes about 4 hours to fully charge the battery. It will take longer if you use the phone while charging.
2. Remove the charger by pulling the plug backwards.

When the phone is turned on, you can check the charging status in standby.

When the phone is turned OFF, the screen will indicate the charging status as well.

Turn on and turn off the phone

To turn on and turn off the phone

1. Press and hold down  (power key) to turn the phone on.
2. Press and hold down  (power key) to turn the phone off.

VoIP accounts Settings

Your phone normally has a default VoIP settings based on your service provider's information. You may have the settings from your Telephony service provider already installed in your phone or you may receive the setting information (i.e. SIP Accounts name, number, password and SIP server IP address) from Telephony Service Provider or IP-PBX manager if this WiFi phone is used as extension of IP-PBX. You also can add more VoIP settings manually. [See "VoIP settings" at page 30.](#)

WiFi network settings

Your phone normally has a default WiFi network settings based on your service provider information. You may have the settings from your service provider already installed in your phone or you may receive the settings from the service provider as a special text message. You also can add more WiFi network settings manually. [See "WiFi settings" at Page 24.](#)

Standby

After you have turned your phone on and the Phone number or Telephony service provider of the phone appears, the view is called standby. It means this Wifi phone is ready to make or receive a VoIP call.

Flight Mode

If you turn on your phone and Flight mode is activated, you will be given the option of using your phone either in Normal Mode with full functionality, or Flight Mode with limited functionality. WiFi network will be disconnected to prevent from disturbing sensitive equipment.

Please follow on board regulations and flight crew's instructions for use of electronic devices.

To view flight mode

1. From standby select Menu > Setting > WiFi settings > Flight Mode
2. Press the navigation key  or  to turn on or turn off Flight Mode.
3. Press  (Left) to save this mode.

Navigation

The main menus are shown as icons and submenus are shown as lists. Use the navigation key to scroll through main menus and submenus.

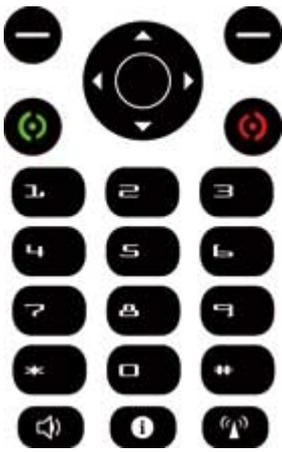

To navigate the phone menus

1. From Standby select **Menu**.

4. Press  (L) to save the call settings.

Call divert

Call divert allows you to divert your incoming calls to another phone number. For details, please contact your Telephony Service Provider or IP-PBX Manager.

1. From standby select Menu > Settings > Call divert.
2. Press the navigation key  or  and select one option
 - Divert all calls please select "Unconditional"
 - Divert calls when your call is busy please select "Busy."
 - Divert call when your call is no reply, please select "No reply."
3. Set the divert option yes (activate) or no (cancel) to turn on or turn off the divert function.

Above divert options can be activated at the same time.

Security

When phone lock is activated, the code is required when the phone is switched on.

Avoid using access code similar to the emergency number to prevent accidental dialing

of the emergency number.

If you forget the codes, contact your Telephony Service Provider or IP-PBX manager.

To activate phone lock

1. From standby select Menu > Settings > Security > Phonelock.
2. Press the navigation key  or  and select "Activate" or "Deactivate".
3. Press  (L) and one box will appear to ask you to enter one password.
4. Press  (L) to activate it.

To change phone lock code

The code can be used to lock the phone in order to avoid unauthorized usage. The factory setting for the code is 1234. To avoid unauthorized usage, please change the lock code when you get the phone. Keep the new code secret and in a safe place separating from your phone.

1. From standby select Menu > Settings > Security > change phone code.
 - Enter your current phone code.
 - Enter your new phone code.
 - Enter your new phone code again as verification.

Factory reset

You can reset your phone to the factory settings, including profiles, personalization, WiFi settings, passwords, and so on. To complete this process, it requires authentication which is the same password as security or phone lock password.

1. From standby select Menu > Settings > Factory reset.
2. Enter the password for verification.
3. When the password is confirmed, the settings will be back to factory settings.
Note: Phonebook and Call History do not be restored.

My phone info.

You can view your phone information.

1. From standby select Menu > Settings > My phone info.
2. Press the navigation key  or  and
 - Select "Phone info." will show the phone number, firmware version, and Mac address.
 - Select "WLAN info." will show SSID of the Network to which the phone is connected.

- Select "Network info." will show the network information including TCP/IP, IP address, Subnet Mask, Default gateway and DDNS.

Admin Menu

Admin Menu provides ping test, VoIP setting and coder settings.

Ping Test

Ping Test can help you identify if the connection of your phone and WiFi AP goes well.

1. From standby select Menu > Settings > Admin Menu > Ping Test.
2. Press the navigation key  or  and select "Gateway" or "DNS Server".
3. Your phone will send messages to the Gateway or DNS Server which your phone is connecting to.
4. Press  (L) to stop sending messages to the Gateway or DNS Server and get the sending result showing on the screen.

It means the channel between your phone and the Gateway or DNS Server is good if your phone gets all replies.

You can also check the connecting of your phone with another WiFi network by manual input.

1. From standby select Menu > Settings > Admin Menu > Ping Test.
2. Press the navigation key  or  and select "Manual Input".
3. Input IP address or website address.
4. Press  (L) to start to connect test.
5. Press  (L) again to stop sending messages to IP address or website address and get the sending result showing on the screen.

It means the channel between your phone and another WiFi network is good if your phone gets all replies.

VoIP SIP Account Setting

VoIP Setting is usually setup by your Telephony Service Provider or IP-PBX manager already. If NOT, you need to get the setting information from your service provider. Here are the procedures to configure SIP accounts to WiFi Phone.

Setup a new VoIP SIP account Profile

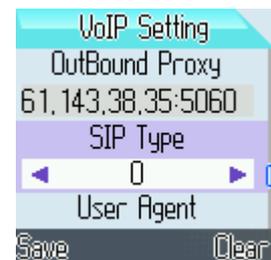

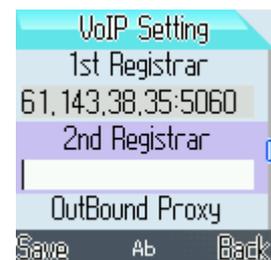

1. From standby select **Menu > Settings > Admin Menu > VoIP Setting.**
2. Press the navigation key  or  and select one profile.

VoIP Setting	
Display Name	8579
User Name	8579
Auth. Password	
Save	Ab Clear

Input the following information.

- Display Name: The name to display on your phone in standby mode.
 - User Name: Should be provided by your service provider.
 - Auth. Password: Should be provided by your service provider.
 - Domain: Should be provided by your service provider. **It is MUST to fill in the right setting or the VoIP Phone cannot be activated correctly. The format of Domain is IP address sometimes. The compositions of IP address are four integers separated by one dot "."**
 - 1st Proxy: Should be provided by your service provider. **It is MUST to fill in the right setting or the VoIP Phone cannot be activated correctly. The format of Proxy is IP address following Port Number sometimes. One colon ":" has to be added before Port Number. The default port no is 5060 if you do not enter it.**
 - 2nd Proxy: Should be provided by your service provider if necessary.
 - 1st Registrar: Should be provided by your service provider. **It is MUST to fill in the right setting or the VoIP Phone cannot be activated correctly. The format of Registrar is IP address following Port Number sometimes. One colon ":" has to be added before Port Number. The default port number is 5060 if you do not enter it.**
 - 2nd Registrar: Should be provided by your service provider if necessary.
 - OutBond Proxy: Should be provided by your service provider if necessary. Normally, it is left blank.
 - SIP Type: Should be provided by your service provider if necessary. Default type is 0.
 - User Agent: Should be provided by your service provider if necessary. Normally, it is left blank.
 - Proxy String: Should be provided by your service provider if necessary. Normally, it is left blank.
 - VoIP Name: The name of the profile.
3. Press **⏪ (L)** to save the settings.
- ※ When setting Proxy, Registrar, OutBond Proxy, User Agent, or Proxy String, you can press **⏪ (L)** and select "Same as

domain" for quickly setup if the value is the same.

※ See "Entering text" at Page 11 for details.

Activate your VoIP Profile

If you have more than one VoIP SIP account profile, you can activate different VoIP SIP Account profile before making a call.

1. From standby select **Menu > Settings > Admin Menu > VoIP Setting**.
2. Press the navigation key  or  and select one profile.
3. Press  (L) and select "Activate" to activate the selected profile.

Voice Codec setting

Your phone supports three audio compression codec standards, including G.711 μ -Law, G.711 A-Law, and G.729. It allows you to activate them at the same time. Be sure to activate one of them at least. WiFi Phone will use the first priority voice codec to negotiate with remotely VoIP SIP device to talk during establishing connection. Considering WiFi and Internet IP bandwidth limitation, Please select G.729 as the first priority (Move G.729 to up position at LCD display). G.729 voice codec has less IP bandwidth than G.711 A-Law or G.711 μ -Law. And G.729 is most popular to interwork with other SIP device.

To activate Voice codec

1. From standby select **Menu > Settings > Admin Menu > Codec**.
2. Press the navigation key  or  select one codec standard.
3. Press  (L) to enable the selected codec.

To change the priority of the codec

You can change the priority of the codec.

1. From standby select **Menu > Settings > Admin Menu > Codec**.
2. Press the navigation key  or  and select one codec standard.
3. Press  (L) and select up or down to change the priority.

Roaming among WiFi AP

Your phone supports roaming when there are more than 1 WiFi AP in AP Configs list. When you activate roaming, it allows your phone to roam between Access Points according to the signal strength. The WiFi Phone supports Layer 2 roaming which means IP remains unchanged when roaming. If require the support of Layer 3 roaming

which means to renew IP when roaming, please contact your service provider or IP-PBX manager.

To activate roaming

1. From standby select **Menu > Settings > Admin Menu > Roaming.**
2. Press the navigation key  or  to turn on or turn off Roaming Mode.
3. Press  (L) to save this mode.

Note: In order to perform roaming successfully, the suggested IP network setup environment is as follows.

- A. The SSID of different WiFi AP should be the same.
- B. If the SSID of different WiFi AP is different, the WiFi AP WAN port should be connected with the same IP segment or domain.
- C. Save all WiFi AP information to WiFi phone WP589. It can save up to 16 units of WiFi AP information. When WiFi WP589 phone is roaming from one location to another, WiFi Phone IP do not change and keep phone talking without disconnection.

DTMF mode

WiFi Phone supports various DTMF mode including RFC2833, SIP Info and In-Band. The factory default is RFC2833.

Activate DTMF mode

1. From standby select **Menu > Settings > Admin Menu > DTMF mode.**
2. Press the navigation key  or  to select a DTMF Mode.
3. Press  (L) to activate selected DTMF mode.
