Startup

Power is automatically transferred from the host SoundPoint IP 670 phone to Color Expansion Module(s) upon connection. Units may be plugged and unplugged (hot-swapped) at any time to a live SoundPoint IP 670 host phone.

The welcome logo will appear on the display as soon as each Color Expansion Module is detected. After a brief period, this will disappear and the Color Expansion Module can be configured for lines, speed dials or Directory Numbers as desired.

Up to three Expansion Modules can be cascaded to a single host phone, increasing the total number of buttons to 48 for intensive business IP telephony users.

Each of the 14 keys on the Expansion Module feature individual dual-color LED indicators, allowing easy recognition of line or call state. Keys may be programmed for speed dials, lines or directory numbers (DN).

Check with your system administrator if any errors appear during the configuration process or if a specific configuration is required for your application.
